

FLEXI-BARRIER

The JWA Water-Filled Flood Barrier offers a fast, effective, and reusable solution for temporary flood protection. Designed for rapid deployment, it provides reliable defence against rising water levels in a wide range of environments.

Application:

- Flood prevention and control for commercial, industrial and residential sites.
- Suitable for emergency response and temporary site protection.
- Ideal for multi-site use where quick installation and removal are essential.

Key Features:

- No prefixed fittings required; deploys rapidly on site.
- Versatile filling options: can be filled using mains supply, water bowser or natural sources.
- Compact storage: lightweight and easy to stow when not in use.
- Reusable and transportable: Designed for multi-site applications with straightforward setup and removal.
- Custom Sizes Available: Manufactured in a range of standard and bespoke sizes to suit specific requirements.

Model Name	Capacity (L)	Length (M)	Width (M)	Height (M)
FB500	500	1.00	1.20	0.60
