

TOTALLY ENCLOSED LIFTBAG

Enclosed Parachute designed for stable use in currents and during re-floatation, low speed towing and positioning.

Application:

- Stable re-floatation in dynamic environment
- Low-speed towing and precise positioning
- Use in currents, where controlled buoyancy and lift stability are essential
- Its enclosed parachute design makes it ideal for underwater salvage, lifting, and manoeuvring tasks requiring stability and adaptability.

Key Features:

- Offers enhanced stability during lifting and towing, especially in moving water or variable conditions.
- Single Point Attachment: Simplifies secure connection to the lift bag's integrated load-bearing strap system.
- Convertible Operation: Equipped with a manual dump valve and inverter line attachment, enabling rapid conversion to an Open-End Parachute Lift Bag when required.
- Supplied fully assembled with a user manual and service record book for immediate operational use.

Model Name	Part Number	Capacity	Overall Height(M)	Overall Diameter (M)
M5TE	713988	250KG	2.12	1.00
